

Mean Standard Deviation Method For Score Normalization

This examination is conducted in multiple shifts for the same syllabus, in spite of all efforts there are chances of variation in the difficulty level of the questions in various sessions. Thus the score obtained by the candidates of same caliber is likely to vary. In order to equalize the variation in the difficulty level of question papers a process called statistical normalization of marks is resorted to universally which is been accepted for this examination also.

Normalization of scores ensures that the marks accurately reflect the candidates' performance relative to the difficulty of the exam in every Shift. The mathematical process of normalization leads to increase or decrease of marks. Following Formula is universally accepted for this normalization.

$$\hat{M}_{ij} = \frac{\bar{M}_t^g - M_q^g}{\bar{M}_{ti} - M_{iq}} (M_{ij} - M_{iq}) + M_q^{gm}$$

$\hat{M}_{ij}$ = Normalized marks of j^{th} candidate in the i^{th} shift.

$\bar{M}_t^g$ = is the average marks of the top 0.1% of the candidates considering all shifts (No. of candidates will be rounded up)

M_q^g = is the sum of mean and standard deviation marks of the candidates in the paper considering all shifts.

$\bar{M}_{ti}$ = is the average marks of the top 0.1% of the candidates in the i^{th} shift (No. of candidates will be rounded up)

M_{iq} = is the sum of mean marks and standard deviation of the i^{th} shift

M_{ij} = is the actual marks obtained by the j^{th} candidate in i^{th} shift.

M_q^{gm} = is the sum of mean marks of candidates in the shift having maximum mean and standard deviation of marks of candidates in the examination considering all shifts.

Example 1: Calculating Normalizes score of a candidate obtained 164.00000 Prorated Marks in 06th Nov 2025_Shift1:

$$\hat{M}_{ij} = \frac{\bar{M}_t^g - M_q^g}{\bar{M}_{ti} - M_{iq}} (M_{ij} - M_{iq}) + M_q^{gm}$$

$$\hat{M}_{ij} = \frac{185.11134 - 151.00947}{180.66667 - 151.84707} * (164.00000 - 151.84707) + 159.68754$$

$$\hat{M}_{ij} = \frac{34.10187}{28.81960} * (12.15293) + 159.68754$$

$$\hat{M}_{ij} = 14.38041 + 159.68754$$

$$\hat{M}_{ij} = 174.06795$$

Note:

1. Calculation of marks will be done up to 5 Decimal Places.
2. Proration is done for the questions which are been ignored in that shift.
3. Normalization of scores ensures that the marks accurately reflect the candidates' performance relative to the difficulty of the exam in every Shift. The mathematical process of normalization leads to an increase or decrease of marks beyond the maximum or minimum marks.
