	Comprehension:
	Read the given passage carefully and answer the questions that follow. Plastics are not made by nature. They are materials made from oil that humans invented in the middle of the 20th century. Since then, we have used plastics for everything. Plastic is the material most of your toys are made of. Bottles of water and many grocery bags are made of plastic, too. Nowadays, even some clothes are made of plastic threads! When people throw away things made of plastic, they do not break down in the environment like autumn leaves that disappear after a few months. Plastic things never disappear, they just become smaller and smaller until they are so tiny that we cannot see them anymore, even with a microscope! These tiny bits of plastic are called microplastics. These microplastics can be further broken down into particles called — 'nano' that means really, really small. Nanoplastics are smaller than bacteria and may even be smaller than viruses. Scientists have discovered that nanoplastics are everywhere on Earth, in the soil, in the air, in the water of our rivers and oceans, and even in the tap water that we drink! They come from all our plastic garbage that is not properly thrown away or recycled and ends up in the environment.
	SubQuestion No : 58
Q.5	According to the passage, what happens to plastic waste over time?
8	
Ans	✗ 1. It turns into biodegradable material.
	✗ 2. It disappears completely like autumn leaves.
	✗ 3. It dissolves in water and vanishes.
	✓ 4. It shrinks until it becomes invisible but never fully disappears.
