Comprehension:
Read the given passage and answer the questions that follow. Most of us seem to think that education is a means to earning a living, earning social position and respectability. There are people who seem to think that one learns in order to earn. Worst of all, some of us see education as capable of serving no other end than leading to a happy, contented worldly life. Our country, our young men and women are plagued by this attitude. Our students choose a particular course not because they are given to believe that a particular course has in it better employment potentialities than the other courses. What happens in this process is that a particular discipline is not able to attract the right talent to study and master it. Most often students with little taste in medicine get admitted to the bachelor's degree course in medicine; students who are interested in literature go to science and commerce; and so on. It is wrong on our part to see learning and earning as having a one-to-one correspondence. It is wrong to think that the main purpose of education is to help us earn a fat bread. It is unfortunate that our educational planners and leaders have done little to dispel this impression. Certainly, we need to have a peaceful, settled life; we need to live on our own effort; our own earning; we need to support our parents, wife and children and other dependants. And education must help us in this. However, this is not the only or the primary aim of education. Education in the right sense of the term is meant to drive away our ignorance and beastliness and monstrosities and take us to refinement and culture. It is meant to enrich our faculties and lead to nobility of thought and behaviour.
