- (b) 791.68 cm³
- (c) 905.14 cm³
- (d) 700.50 cm³

Ans.(b)

Q59. In $\triangle PQR$, medians PL, QM, and RN intersect at centroid G. If the area of $\triangle PQR$ is 72 cm², what is the area of $\triangle GQR$?

- (a) 12 cm²
- (b) 18 cm²
- (c) 24 cm²
- (d) 36 cm²

Ans.(c)

Q60. If $x + \frac{3}{x} = 8$, find the value of $x^3 + \frac{27}{x^3}$.

- (a) 440

(b) 512

(c) 398

(d) 480

Ans.(a)

Q61. If $\sin A = \frac{m^2 - n^2}{m^2 + n^2}$, what is $\cos A$?

(a) $\frac{2mn}{m^2 + n^2}$

(b) $\frac{2mn}{m^2 - n^2}$

(c) $\frac{m^2 + n^2}{2mn}$

(d) $\frac{m^2 - n^2}{2mn}$

Ans.(a)

Q62. If the radius of a circle is tripled, then its area is

(a) Tripled

(b) Sextupled

(c) Nonupled

(d) Quadrupled

Ans.(c)

Q63. Solve: $\sqrt{1600}$

(a) 32.0

(b) 35.0

(c) 42.0

(d) 45.0

Ans.(a)

Q64. A cylindrical storage container has a base radius of 4 cm and consists of 6 stacked disks. The heights form an arithmetic progression, starting from 1 cm for the bottom and 1 cm for the top. What is the total volume? (Use $\pi = 3.14$)

(a) 1808.64 cm³

(b) 1507.20 cm³

(c) 2010.50 cm³

(d) 1205.76 cm³

Ans.(a)

Q65. A right circular cone is divided into two sections by a plane parallel to the base, such that the volume of the smaller cone is $\frac{1}{27}$ of the volume of the original cone. Determine the ratio of the height of the smaller cone to the height of the frustum.

(a) 1:2

(b) 1:3

(c) 1:1

(d) 2:1

Ans.(a)

Q66. Given $\frac{\sqrt{7+x}+\sqrt{7-x}}{\sqrt{7+x}-\sqrt{7-x}} = 2$, then what is the value of x ?

Q81. Which statement best articulates the central thesis?

Read the following passage:

In the architecture of human existence, communication is not merely a tool but as the generative substrate upon which collective consciousness is constructed. Communication transcends transactional exchange; it constitutes the epistemic medium through which realities are negotiated, identities affirmed, and social contracts sustained. The essence of communication arises less from technological conduits than from the ontological necessity of shared meaning. Historically, civilizations have been shaped by their communicative practices, where institutionalized forms of discourse, be it through oral tradition or digital jurisprudence, have governed the velocity of societal evolution. The personal stratum, where individual communication intersects with collective forms, forms a semiotic constellation wherein silence may signify as profoundly as speech. Misalignment across these strata frequently precipitates alienation or conflict, underscoring that effective communication entails calibrated reciprocity rather than unilateral expression. Within organizational ecosystems, communicative transparency functions as the linchpin of institutional trust. Hierarchical opacity engenders informational asymmetries that corrode cohesion, whereas dialogic engagement fosters adaptive resilience and innovation. Cultural matrices further complicate communicative exchange by embedding within linguistic codes tacit assumptions and normative expectations. What manifests as assertiveness in one milieu may register as impropriety in another, necessitating intercultural literacy and contextual discernment. In the digital epoch, algorithmic mediation amplifies communicative reach while simultaneously engendering echo chambers and epistemic fragmentation. The ethical stewardship of discourse thus assumes heightened urgency. Communicative competence in contemporary society demands not only rhetorical dexterity but also critical reflexivity and moral accountability. Ultimately, to communicate is to participate in the co-

authorship of social reality; it is through language that humanity perpetually reconstructs the contours of its shared existence.

- (a) Communication primarily accelerates information transfer.
- (b) Language is foundational to constructing collective realities.
- (c) Technological innovation determines cultural superiority.
- (d) Communication is secondary to institutional power.

Ans.(b)

Q82. The phrase “semiotic constellation” most nearly implies:

Read the following passage and answer the questions based on the passage:

In the architecture of human civilization, language operates not merely as a communicative instrument but as the generative substrate upon which collective consciousness is constructed. Communication transcends transactional exchange; it constitutes the epistemic medium through which realities are negotiated, identities are affirmed, and social contracts are sustained. The exigency of communication arises less from logistical coordination than from the ontological necessity of shared meaning. Historically, civilizations have been sculpted by successive transformations in communicative modalities—from oral traditions that encoded cosmologies to print cultures that institutionalized jurisprudence and scientific rationality. Each technological inflection has recalibrated not only the velocity of transmission but also the hierarchy of authority and the legitimacy of knowledge claims. At the interpersonal stratum, communication forms a web of reciprocal resonance, where linguistic codes tacitly govern social interactions. What manifests as a shared cultural literacy and common register as the velocity of exchange accelerates, reaching while simultaneously deepening the collective consciousness. In this sense, communication is not merely a tool but a discourse that assumes heightened agency and communicative competence. Contemporary society demands not only rhetorical dexterity but also moral flexibility and ethical accountability. Ultimately, communication is the linchpin of the co-authorship of social reality; it is through language that humanity perpetually reconstructs the contours of its shared existence.

Q84. The tone

Read the following passage and answer the question based on the tone of the passage.

In the architecture of modern communication, the digital age opens not merely a new channel but as the generative space where the very fabric of social reality is being woven. The transactional nature of exchange; it is through this medium that the social contract is being renegotiated, and the ontological necessity of communication arises from the very transformations in the communicative landscape. The digital era has not merely accelerated the velocity of transmission but has also challenged the hierarchy of authority and the legitimacy of knowledge claims at the personal stratum, where communication unfolds across verbal articulation, non-verbal gesturality, and paralinguistic modulation, forming a semiotic constellation wherein silence may signify as profoundly as speech. Misalignment across these strata frequently precipitates alienation or conflict, underscoring that effective communication entails calibrated reciprocity rather than unilateral expression. Q85. . The term “epistemic fragmentation” refers to:

Read the following passage and answer the questions based on the passage:

In the architecture of human civilization, language operates not merely as a communicative instrument but as the generative substrate upon which collective consciousness is constructed. Communication transcends transactional exchange; it constitutes the epistemic medium through which realities are negotiated, identities are affirmed, and social contracts are sustained. The exigency of communication arises less from logistical coordination than from the ontological necessity of shared meaning. Historically, civilizations have been sculpted by successive transformations in communicative modalities—from oral traditions that encoded cosmologies to print cultures that institutionalized jurisprudence and scientific rationality. Each technological inflection has recalibrated not only the velocity of transmission but also the hierarchy of authority and the legitimacy of knowledge claims. At the interpersonal stratum, communication forms a web of reciprocal relations, forming a semiotic constellation where these strata frequently preclude the idealized reciprocity rather than undermine it. It functions as the linchpin of institutional cohesion, whereas dialogic communication tends to complicate communicative coherence. What manifests as a linear progression is improper algorithmic reach while contextual dissonance persists. Simultaneous discourse thus assumes hegemony in competition with rhetorical dexterity but lacks ultimate accountability. Ultimately, the language that humanity performs is of its shared existence.
