Embedded within these frameworks is the presumption that non-Western digital economies must be 'modernised' before they may participate meaningfully in global data governance—reproducing a developmental asymmetry that conceals itself as technical assistance. Meanwhile, discourse around cybersecurity and information disorder is increasingly structured around vocabularies of urgency and catastrophe. This framing, paradoxically, enables a mode

Civil society coalitions are incorporated, not empowered. Subaltern voices are platformed only to be curated, not amplified. Thus, genuine digital equity requires not merely better representation within existing governance architectures, but a fundamental interrogation of those architectures themselves. Absent such a reckoning, international digital governance will remain a largely ceremonial [5] _____, rich in declarations and frameworks, hollow in transformative substance.

- (a) diffusion

Q79. What should be the most appropriate option to fill in the blank?

In the following passage, choose the most appropriate option to fill in the blank.

The discourse of digital governance, which has emerged in the wake of technological advancements, often embeds assumptions of Western epistemic architectural formations, a vocabulary of extractive verbiage, and institutional [2] _____ that perpetuates colonial administrative presumptions. Embedded within this framework is a false symmetry that conceals itself as universal. Meanwhile, the digital landscape is increasingly shaped by the boundaries of urgency and catastrophe. This troubling paradox of digital governance enables a mode of discursive [3] _____, wherein structural reform of platform monopolies is deferred in favour of incremental and often counterproductive regulatory patches. Q80. What should come in the place of blank number [5]?

In the following passage, some words have been deleted. Read the passage intently and choose the most appropriate option to fill in each blank:

The discourse surrounding digital sovereignty in the twenty-first century reveals less a genuine redistribution of technological power and more a performance of procedural inclusion. As Silicon Valley platforms consolidate their dominance over global communication infrastructures, the governance frameworks they propose often embed assumptions of market-led innovation and technological [1] _____ that systematically marginalise alternative architectural paradigms. The global South's data ecosystems, rather than being valued as autonomous epistemic formations, are routinely recast through the extractive vocabulary of 'capacity development,' a phrase whose institutional [2] _____ exposes its debt to earlier colonial administrative logics.

Embedded within these frameworks is the presumption that non-Western digital economies must be 'modernised' before they may participate meaningfully in global data governance—reproducing a developmental asymmetry that conceals itself.

Increasingly, such frameworks enable a mode of discursive governance that is incremental and often counterproductive.

Demands for digital sovereignty must instead meet with strategic governance designed to forestall binding systems that incorporate inequities platformed only to be cured by a re-evaluation of the frameworks within existing governance and international relations. With a reckoning, the hollow in transnational digital frameworks,

- (a) pageantry
- (b) reckoning
- (c) manifesto
- (d) scaffolding
