Read the passage given below and answer the question that follow:

Before delving into the role that missionary schools played in the emergence of Indian nationalism, it is necessary to understand the broader context in which Christian missionaries had been religious actors in the Indian subcontinent since the 1700s. With the rise of British power under the East India Company, and later the crown, missionaries of various denominations made India one of their largest areas of activity. This was especially true after the amendment of the company's charter in 1813, which allowed missionaries unhindered access to the company's domains. But it was through their involvement in new forms of education that the missionaries made a significant and perhaps the most lasting impact.

Many 'educational missionaries' initially saw Western learning and knowledge as a stepping stone to spreading Christianity. By the 1870s, however, this approach to the conversion of India's Brahmins and other high castes had largely fallen out of favor. By then, the most active Anglican missionary societies - The Church Missionary Society (CMS), The London Missionary Society (LMS), The Society for the Propagation of the Gospel (SPG), and the Cambridge Mission to Delhi (CMD) - were mostly involved in teaching in high schools and colleges across North India. In the United Provinces, India's most populous province, these societies ran half of the high schools and colleges. American missionary societies, by contrast, worked overwhelmingly with the lower-caste communities and were far less involved in higher levels of education. Anglican mission schools, therefore, interacted with the very groups and communities who would go on to lead the Indian nationalist movement.

Read the passage given below and answer questions:

The dyeing industry is one of the most polluting industries globally. Use of eco-friendly products and processes can help reduce the pollution. Eco-friendly dyes are colourants derived from natural, non-toxic, and biodegradable sources. Unlike synthetic dyes, which are often made from petroleum-based chemicals, eco-friendly dyes come from plants, minerals, and even insects. Turmeric is known for its bright golden-yellow colour. It is derived from the root of the turmeric plant. Indigo gives blue colour and is derived from the leaves of Indigo plant. Madder is derived from roots of *Rubia tictorum* plant. It is used to give red colour on textile substrates in combination with alum. Cochineal is made from the cochineal insect and produces vibrant reds and pinks. Recycled dyes are extracted from coloured textile waste materials and industrial by-products. Supercritical CO₂ dyeing uses pressurized carbon dioxide to dissolve and apply dyes. This waterless process is highly efficient and environment friendly.

Read the passage given below and answer questions:

The dyeing industry is one of the most polluting industries globally. Use of eco-friendly products and processes can help reduce the pollution. Eco-friendly dyes are colourants derived from natural, non-toxic, and biodegradable sources. Unlike synthetic dyes, which are often made from petroleum-based chemicals, eco-friendly dyes come from plants, minerals, and even insects. Turmeric is known for its bright golden-yellow colour. It is derived from the root of the turmeric plant. Indigo gives blue colour and is derived from the leaves of Indigo plant. Madder is derived from roots of *Rubia tinctorum* plant. It is used to give red colour on textile substrates in combination with alum. Cochineal is made from the cochineal insect and produces vibrant reds and pinks. Recycled dyes are extracted from coloured textile waste materials and industrial by-products. Supercritical CO₂ dyeing uses pressurized carbon dioxide to dissolve and apply dyes. This waterless process is highly efficient and environment friendly.
